

# Drive Shaft Clamping Center Support Kit

## European Parts Solution Has the Permanent Fix for the Common Premature Bearing Support Failures

The innovative Drive Shaft Clamping Center Support (DSCCS) by E.P.S. is the only true Permanent fix to premature bearing support failures with Porsche Cayenne & VW Touareg vehicles. Unfortunately, replacing the bearing support with another similar rubber mount will only bear the same results experienced with the factory rubber mount. This Patent-Pending device, developed by the E.P.S. technician team, were able to create what is now the end-all solution to failing bearing supports.

The Clamping Center Support is the **ONLY** device that can be installed without removing or requiring the disassembly of the drive shaft.

# Drive Shaft Clamping Center Support Kit

## Tech Specs -

There is only **ONE** certain and definite fix with **NO** disassembly of the drive shaft.

### Drive Shaft Center Support

(Part# 955 421 020 15 SUP)

Includes: Driveshaft Support, Flex Coupler and Hardware

The E.P.S. Drive Shaft Clamping Center Support for the Porsche Cayenne & Volkswagen Touareg takes a completely different approach in solving this all too common problem. Getting away from the proven failure-prone solid rubber vibration dampener, E.P.S. instead uses multiple, hollow Silicone Pods. This design is much better equipped to withstand the constant compressing and stretching forces generated while in use. The silicone material also does a much better job of handling the heat and atmospheric conditions

located under the vehicle. To get installation information, go to: <http://europeanpartssolution.com/instructions>

#### Key Benefits:

- Permanently repairs the notorious bearing support
- DIY installation - typically in under one hour using household tools

- No need to remove or disassemble your current Drive Shaft
- No need to re-balance your Drive Shaft
- No need to send in your faulty Drive Shaft
- No core charges
- Patent Pending design

EPS offers other solutions as well to improve and extend the life of your vehicle...

#### ◀Engine Cooling Fan Shroud

(Part# 930 106 006 07 & Part# 930 106 006 00)

Long discontinued from Porsche E.P.S. has manufactured an all aluminum replacement Alternator Fan Housing that is much more durable than it's predecessor. You can expect a direct fit with no modifications needed.

#### ◀Engine Cooling Fan Blade

(Part# 930 106 012 00)

Replace your old or worn blade alternator fan with this factory replacement. A worn fan can cause premature damage to the alternator. On some older cars this fan is an upgrade which improves cooling and engine temperature. The additional blades allow for increased airflow.

## Manufacturer Information -

E.P.S. is an automotive parts manufacturing company, developing and manufacturing parts with improvements in both the material and design. The main goal for E.P.S. is employing innovation and technology to exceed OEM standards and offer high quality replacement parts at a lower cost.
