# Latest technology, striking look.

Brake discs from ATE – good all round.

As a specialist in braking systems, ATE has been setting standards for more than 100 years – in quality, innovation and system compatibility. This includes initial equipment capability in research, production and in scope of supply. As a result, brake discs and brake pads from one of the world's leading suppliers to the automobile industry are also clear favorites in the aftermarket. Right now, ATE offers you the best rationale, both technically and visually: our coated brake discs.

Outstanding appearance, wide range, top-quality – ATE's brake discs offer you:

- The largest range of coated brake discs available at present.
- The latest technology through high-carbon brake discs (e.g. GG 25 HC discs).
- Non-rusting through coating with environmentally compatible material.
- Coated areas remain free from rust even after installation.
- Attractive design, particularly on aluminum wheel rims.

**Your benefit:**  
Top-quality with a new, permanently non-rusting look.

## Special, even at first glance – coated brake discs from ATE.

ATE once again remains true to its tradition with its coated brake discs: offer more than expected and always stay one step ahead! This maxim applies equally to material quality, braking performance, service life and customer service:

- No brake judder.
- Very tight manufacturing tolerances.
- Balancing of ventilated brake discs.
- Wide range of brake discs, including fastening screws.
- No complicated changes to your internal systems due to identical item numbers of uncoated and coated brake discs.
- Complete solutions above and beyond brake discs.

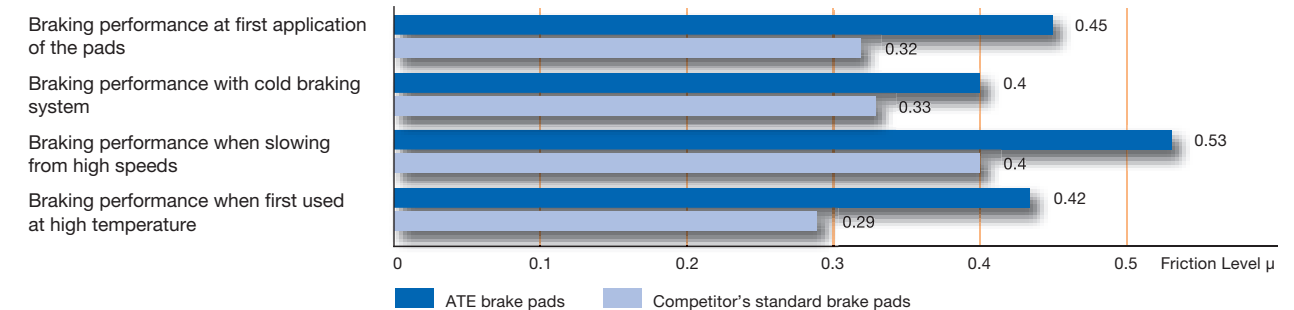

**Your benefit:**  
high-carbon discs with additional alloying – as a system supplier with OE expertise, ATE also offers ideal solutions for the aftermarket.

## Remarkable material mixtures, remarkable technology – brake pads from ATE.

ATE produces in Europe's most modern brake pad factory – in 100 % original quality. These high-quality, branded products are aimed at the demanding German market. For you, this means:

- A market coverage of more than 95 % in Europe.
- Regularly comes out top in the toughest test procedures. ATE products have always been tested according to the standard for OEMs – a standard which meets the toughest safety requirements and which exceeds the ECE test requirements by far.
- Sophisticated material mixture for optimum friction performance.
- No risk of fading, and full braking performance from the beginning all the way to scorching.
- No brake squeal thanks to the use of underlayers.
- Low inventory maintenance costs thanks to top-selling products.
- Simple tracing in the event of product liability.
- Total supply, including brake pad accessories, available if required.

A comparison with the best-known competitor makes it clear: ATE brake pads offer clearly better performance – in every way and every field.

**Your benefit:**  
Made with the best material mixture on the market, and with a consistently quality-conscious production process, ATE brake pads are today's state-of-the-art.
